

April 19,2021

To bring the Atlantic Provinces Harness Racing Commission in line with the International Federation of Horse Racing Authorities new TCO₂ levels have been established by the APHRC, which will be effective **May 1, 2021**. If the total carbon dioxide (TCO₂) is equal to **36** mmol/litre or higher, said horse will be considered to have a positive test. If said horse is competing on furosemide (Lasix) and has a TCO₂ reading of **38** mmol/litre or higher this shall be considered a positive test.
